

FOR IMMEDIATE RELEASE

DIY Auto Repair is Fast and Free at MechanixTrix.com

If you happen to be an experienced mechanic, a dead car battery or pesky “Check Engine” light are simple problems to solve. But for those who don’t know the difference between a strut and a carburetor, even the simplest car troubles can bring travel plans to a screeching halt. With the recent economy struggles, do-it-yourself auto repair has become a popular new endeavor. With dozens of reputable experts willing to share their valuable knowledge online, you don’t have to be a master technician—or rack up hefty charges—to get running again.

MechanixTrix.com was founded by David Oliva, an experienced mechanic who had fielded complaints from dozens of frustrated drivers who were forking over hundreds of dollars for the diagnosis and repair of problems they could have fixed themselves—or paying for the assembly instructions they needed to install the parts they had purchased. Recognizing a need for a free online resource for car owners, David set out to provide a comprehensive database of common car problems and recommended solutions, eliminating the need for drivers to sift through hundreds of web pages to find what they need. His ultimate goal? To save today’s busy car owners valuable time and money. With X years of combined experience in the automotive industry, the owners of MechanixTrix.com have the necessary expertise and service skills to help ensure drivers a smooth, safe ride.

MechanixTrix.com is a community-driven site, which means all of the resource articles are posted by other drivers. Anyone—from amateur mechanics to everyday drivers—can share an automotive tip or technique by filling out and submitting a simple form. Unlike other DIY car repair sites, MechanixTrix.com doesn’t require its users to create an account or pay any membership fees—joining the online community is fast, free, and easy.

At MechanixTrix.com, drivers have a wealth of free information at their fingertips:

- How-to articles for diagnosing and repairing all types of car problems in several categories, from changing oil to replacing a catalytic converter
- News feeds related to the automotive industry, including cutting-edge technologies and new model releases
- Images, videos, PDFs, and other media files to supplement the articles

Those seeking automotive advice can browse by category (accessories, electrical, driveability, brake, and engine), by vehicle type (i.e. car, truck, motorcycle, etc.), by

manufacturer (i.e. Honda, Ford, etc.), or by year. To search for a specific car problem, they can also enter a keyword or phrase.

Those who are in search of automotive repair instructions or are interested in purchasing advertising space can visit www.MechanixTrix.com.
